

Mohammad Erfan Pouladzadeh

Backend Developer
Python | Django | FastAPI

Backend Developer with 3+ years of experience in designing and developing scalable web applications using Python, Django, and FastAPI. Experienced in building RESTful APIs, real-time systems, and distributed backend architectures using Redis, Celery, and RabbitMQ. Focused on performance optimization, clean architecture, and production-ready systems.

Address
Iran Tehran

Education

2023
High School Diploma in Arts

2023 - 2025
Islamic Azad University

Expertise

- Python
- Django
- Django Rest Freamework
- Flask
- Fast API
- JavaScript
- Celery
- Redis
- MongoDB
- MySQL
- PostgreSQL
- RabbitMQ
- GraphQL
- Docker
- LPIC 1
- Nginx
- Git

Experience

2021 – 2022
Sadid Radin Informatics Industries

Django Developer

- Developed backend modules using Django
- Worked with PostgreSQL database systems
- Implemented business logic using Django middleware and signals

2023 – 2026
OlympicHotel
https://en.olympichotel.ir/

Back End Developer

- Developed backend services for hotel management system
- Implemented booking and reservation logic using Django
- Improved system performance using cachng strategies

2022 – 2026
Satrap Vira Sazan

Back End Developer

https://svs-co.com/

Backend Development:

- Built scalable backend systems using Django and DRF with REST API architecture
- Integrated Redis, Celery, and RabbitMQ for async processing and task management
- Optimized PostgreSQL performance and improved system efficiency

Team Leadership:

- Led backend development team and coordinated project delivery
- Reviewed code and enforced clean architecture and best practices
- Planned system design and backend structure for projects

Technical Instructor:

- Mentored junior developers in Django, REST APIs, and backend systems
- Conducted internal training sessions on backend development and system design
